Reproducible Research Code

Envs, Data & Verification Debt

Duration	2 days
Format	Hands-on workshop
Prerequisites	Research code you want to make reproducible
Audience	Researchers with code, models, or analyses that others need to reproduce

OUTCOME

Make research code and results reproducible under AI assistance: environment pinning, data versioning, and paying down verification debt before it compounds.

WHAT YOU'LL DO

- Pin environments and version data so results survive machine and personnel changes
- Pay down verification debt before it compounds — AI speed-ups fade, complexity stays
- Catch fabricated statistics as an architectural failure, not a prompt failure

HOW IT RUNS

1. The reproduction test
2. Environments
3. Data & results
4. Verification debt
5. Fabrication clinic
6. Debt paydown sprint
7. Handover hour
